**"More-On Door Blankets™"** are a replacement insulation product for weather-stripping. More-On's™ help Consumers save more on their heating and air conditioning related electrical power bills while also serving to reduce moisture, sound, smells, and light from entering and or exiting a room through the dynamic cracks that form between the door and its frame. These cracks form due to a structures natural settling and can be seen in countless millions of skewed door frames in older structures.

***"Seal your cracks today and stop throwing your money away!"***

***"More-on Door Blankets™" come in myriad sizes, shapes, and design patterns.***

Using a "More-on Door Blanket™" offers several benefits. Here are the key advantages:

- **Energy Efficiency:** The door blanket acts as a barrier, preventing heat loss during colder months and cold air infiltration during warmer months. By sealing the gaps between the door and the door frame, it helps to maintain a more consistent indoor temperature, reducing the need for excessive heating or cooling. This can result in energy savings and lower utility bills.
- **Sound Insulation:** The door blanket is designed to reduce sound transmission, acting as a barrier against noise entering or exiting a room. It helps to create a quieter and more peaceful environment, making it particularly useful for rooms where noise control is important, such as bedrooms, offices, or recording studios.

- **Light Blockage:** The door blanket also serves as a light barrier, preventing unwanted light from entering a room through the gaps around the door. This can be beneficial for spaces where light control is desired, such as bedrooms, home theaters, or rooms where privacy is important.
- **Odor and Gas Protection:** The door blanket helps to block the intrusion of unwanted smells and gases from entering or exiting a room. This can be particularly useful in areas where there are strong odors or potential gas leaks, providing an additional layer of protection and improving indoor air quality.
- **Easy Installation and Removal:** Installing a door blanket is a simple and quick process, usually taking under 3 minutes. It does not require any glue, nails, tape, or staples that could damage the door or leave residue. The elastic-lined border allows for easy slip-on installation, similar to fitting a fitted sheet onto a mattress. In the spring or when not needed, the blanket can be easily removed, washed, and stored for future use.
- **Customizable and Aesthetic Appeal:** The door blanket comes in various colors and print schemes, allowing for customization to match the interior design and personal preferences. It can be custom printed with high-definition and 3D imagery, offering a unique and visually appealing addition to the door.
- **Versatility:** The door blanket is designed to fit any type of door, including interior and exterior doors, single or double doors, French doors, garage doors, and even pet doors. It can be adjusted to accommodate different door sizes and shapes, making it a versatile solution for various door types and locations.
- **Customized adjustable Door Sweeps** keeps entries clean and dry, reducing slips and injury.

Overall, using a "More-on Door Blanket™" provides energy savings, improved comfort, noise reduction, light control, odor and gas protection, easy installation, customization options, and versatility for different door types.
